PROJECTS

- Malarial Parasite Detection using YOLO** Jun 2024 – Aug 2024
 - Optimized a YOLOv8 model to detect malarial parasites from **1,000+** blood smear images, achieving **84% precision** (12% accuracy boost) and reducing false positives by 10%
 - Labeled a dataset using Roboflow, applied augmentation (rotation/flipping), and optimized hyperparameters via cross-validation.
 - Evaluated model performance using metrics such as precision, recall, and F1-score.
- AI Job Market Analyzer Dashboard** Jun 2025 – Present
 - Designed an interactive web dashboard using **Plotly Dash** to visualize AI and data job trends across roles, skills, and locations
 - Analyzed **1000+** job postings, identifying top hiring trends, in-demand skills, and salary benchmarks.
 - Deployed live on [Render](#); implemented dynamic filters and advanced visualizations (heatmaps, scatter plots)
- AI-Powered Wildlife Monitoring System** Nov 2024 – Apr 2025
 - Trained a YOLOv8 model, achieving **91% training** and **95% validation accuracy** on the NTLNP dataset across 17 species.
 - Integrated real-time geolocation and alerting system using Leaflet.js for map visualization and Twilio API for automated SMS alerts during wildlife detections.
 - Built an interactive dashboard using React and a Python backend, enabling live detections, manual uploads, and analytics.
